

Notes from call 10/13

by Jason Bedford

The central topics

Topic 1: Integrated prioritization scheme from the group

Topic 2: Potential for collaborating with experimental labs.

Topic 3 Collaborating with ENCODE and GWAS

Topic 3

- The main idea is that in a joint analysis we need consistent access to a unified data set. By submitting a joint applications we could get an expedited decision.
- Lot;s of discussion about weather we could share derived data (from the original data set) with in the group. The conclusion is that Mike Pazin will look into this.

On the topic of what data sets we would be interested in analysing

- we shared this doc: <https://docs.google.com/spreadsheet/ccc?key=0ApNn9g05ykFNdENLeVZPU2s0NXhoczJLcHZLRXRNYXc&usp=drivesdk>
- Mark mentioned that the CCLE is a really nice option. 2 breast and 2 lung samples that looked good.
- The conclusion is that we want to do some pan-something analysis and that it would be nice to be able to share derived data with the ENCODE GWAS group.

Topic 2

- People are generally excited about this, but nothing specific.

Topic 1

- People were generally excited about this, but nothing specific.
