

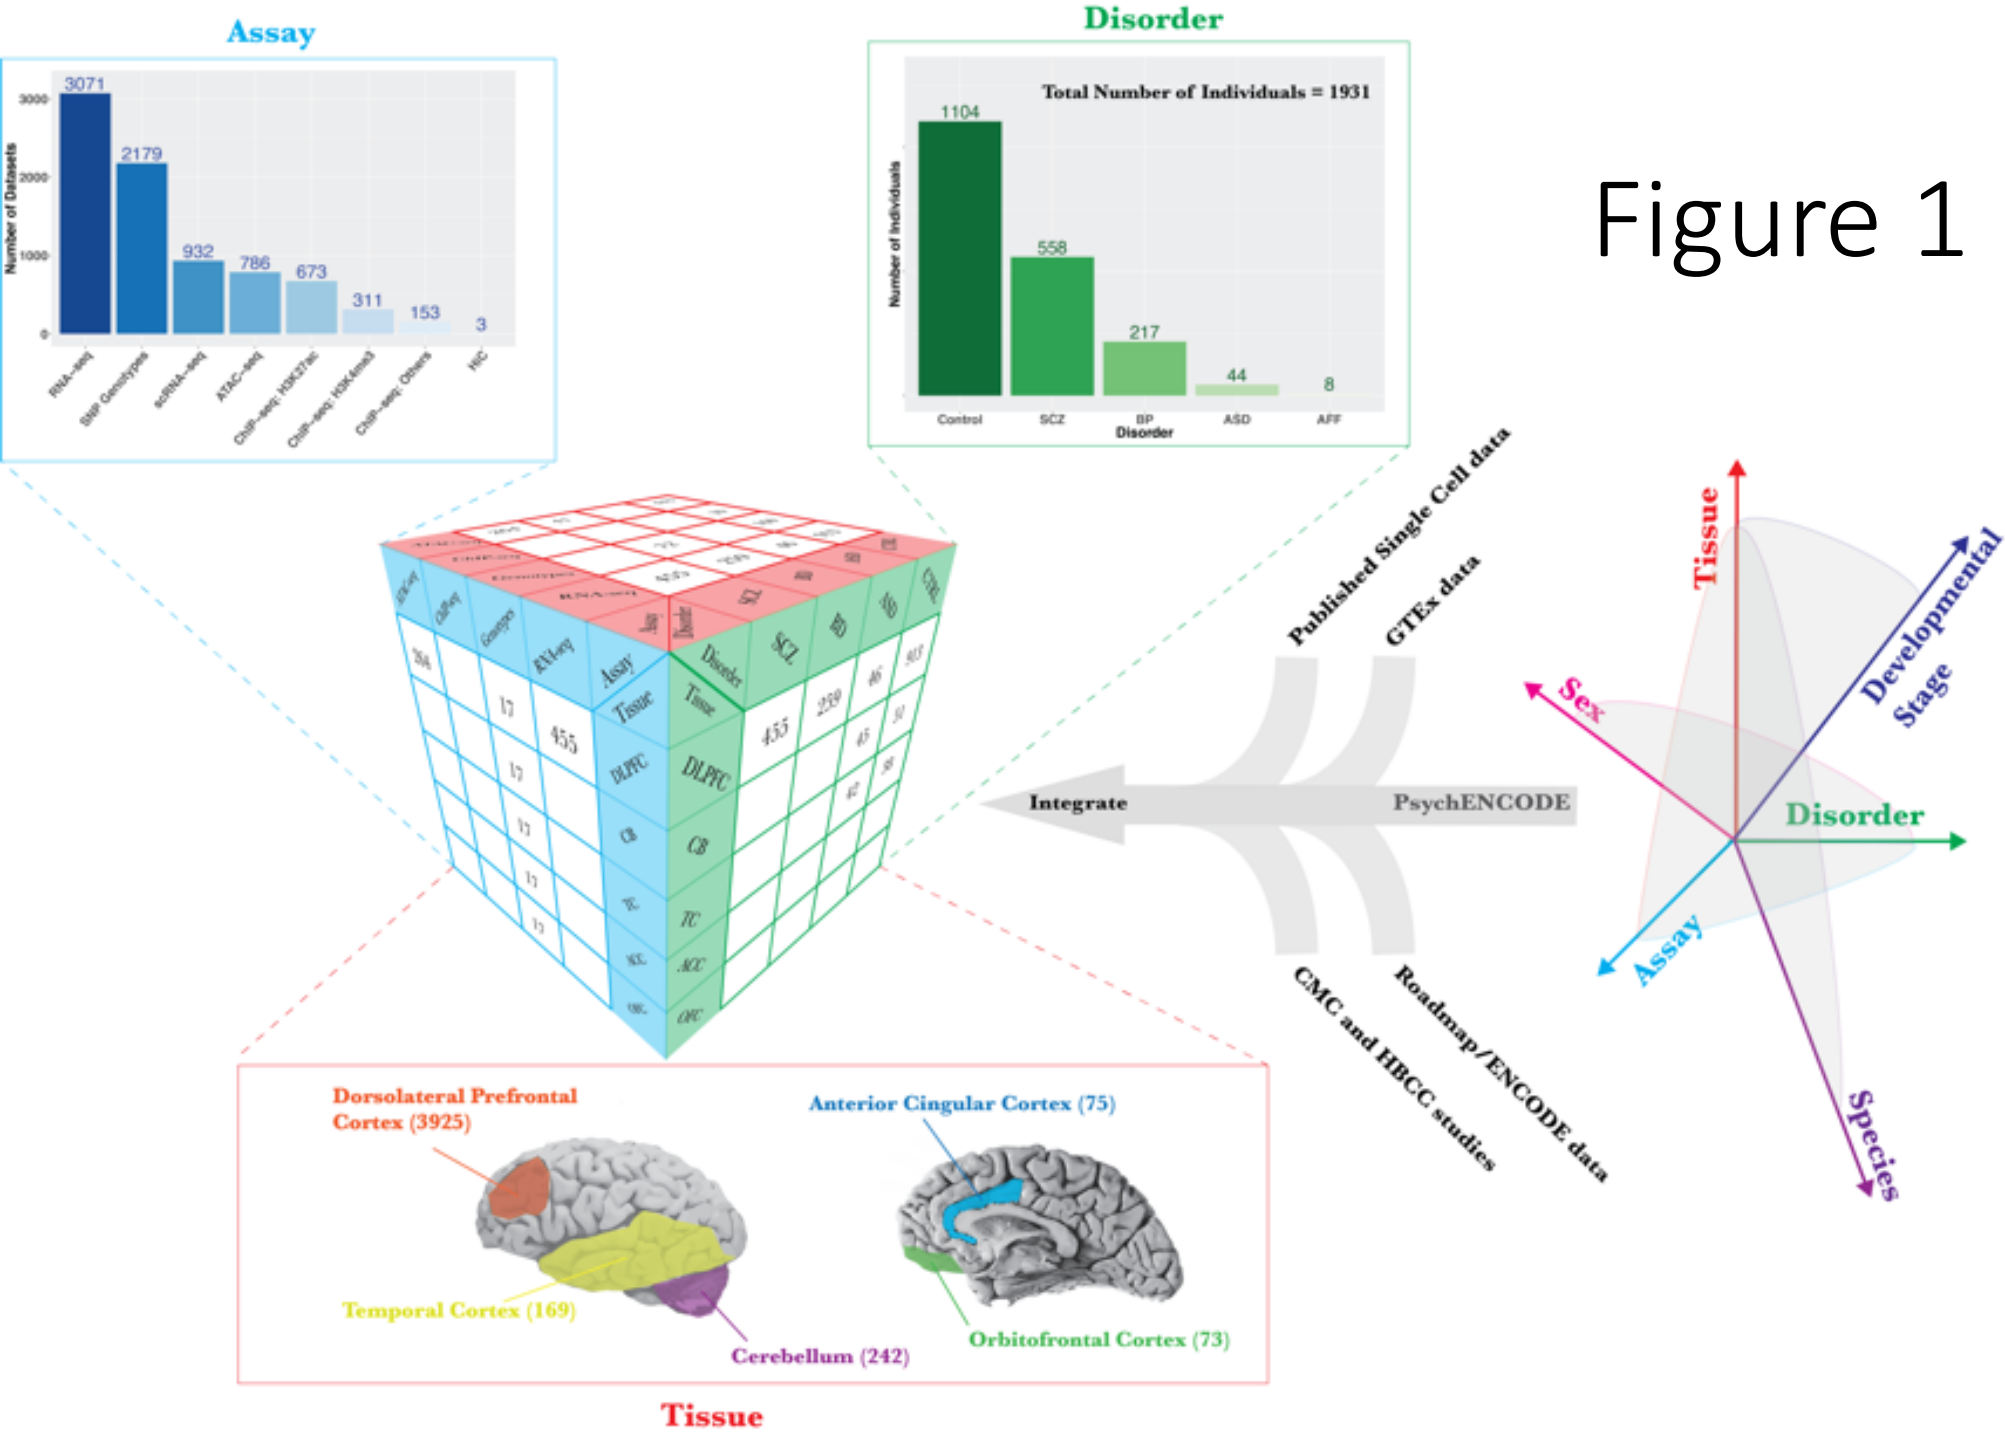

Figure 1

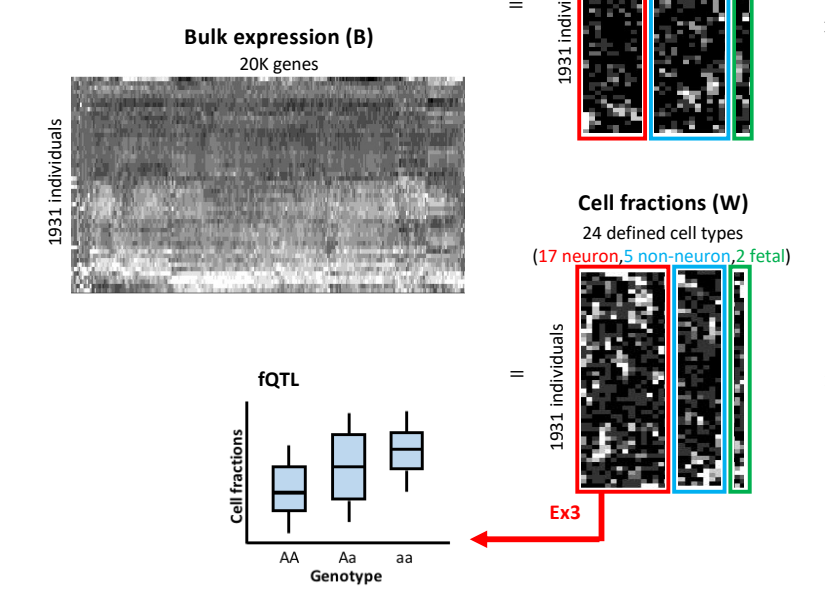

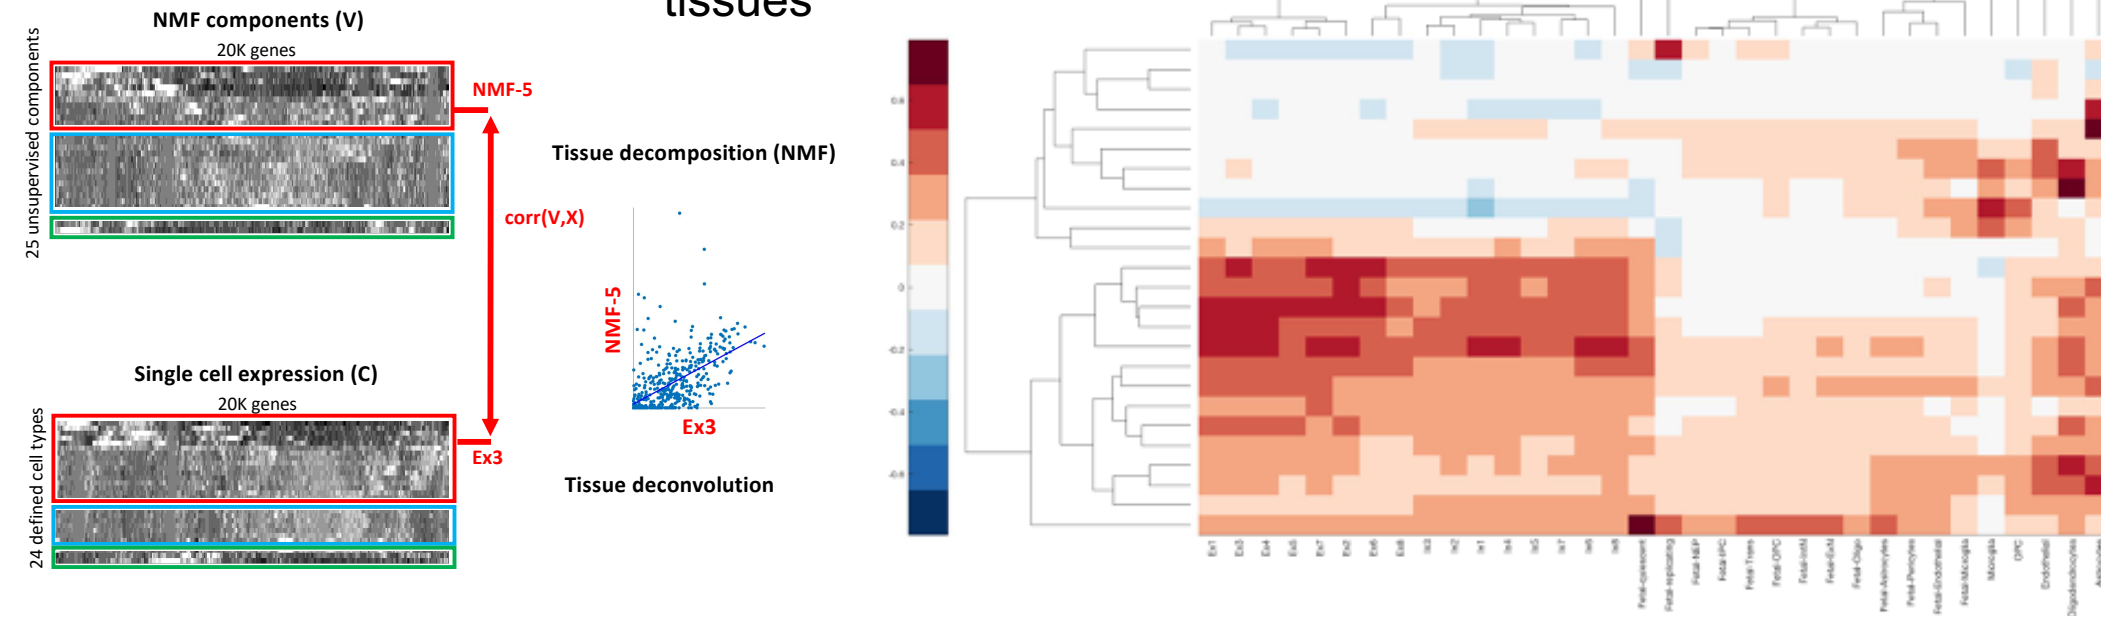

A. Neuronal gene expression variations of tissues vs. cells

Figure 2 Bulk and Single Cell transcriptome

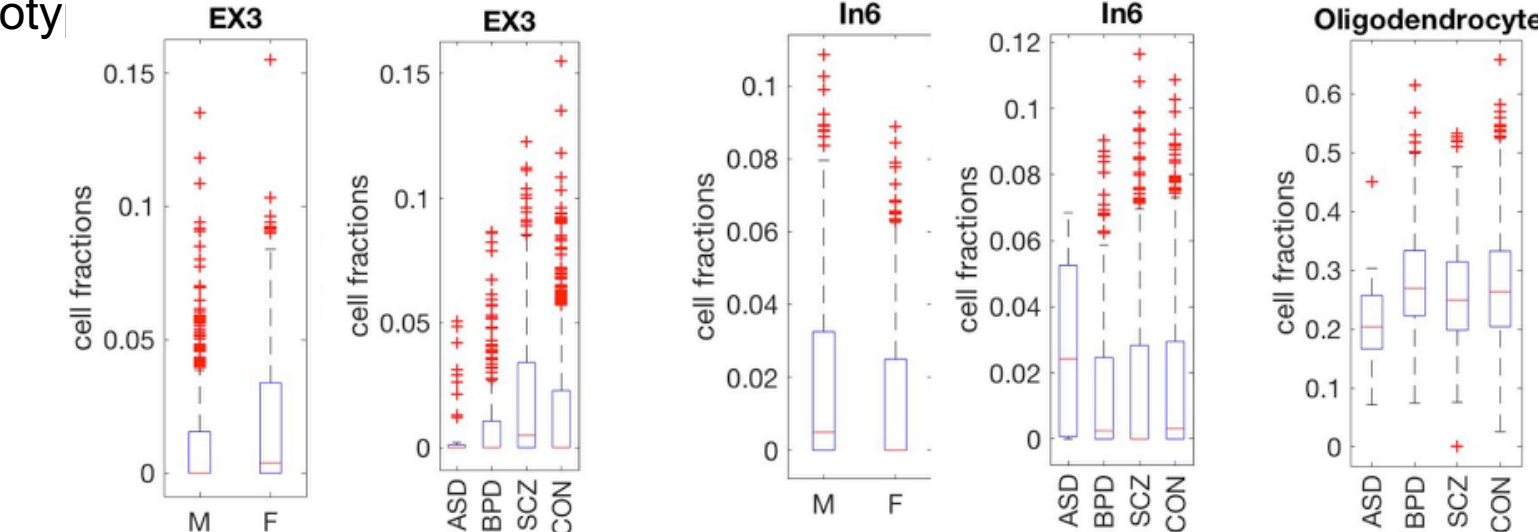

B. Single cell decomposition and deconvolution analyses

C. Decomposition reveals neuronal and non-neuronal cell types in tissues

E. Deconvolution reveals neuronal and non-neuronal cell populations of phenoty

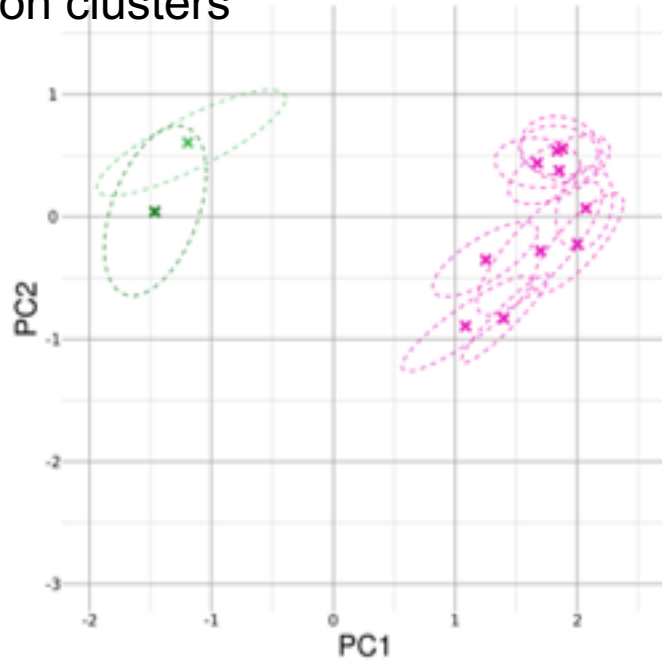

D. Single cell gene expression explains >80% tissue expression covariation

A. Gene expression clusters

B. Enhancer clusters

C. Transcription

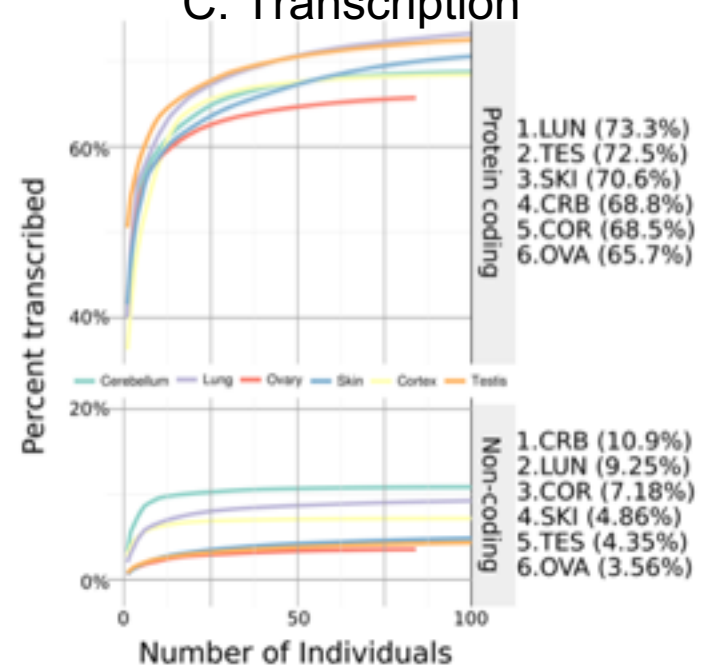

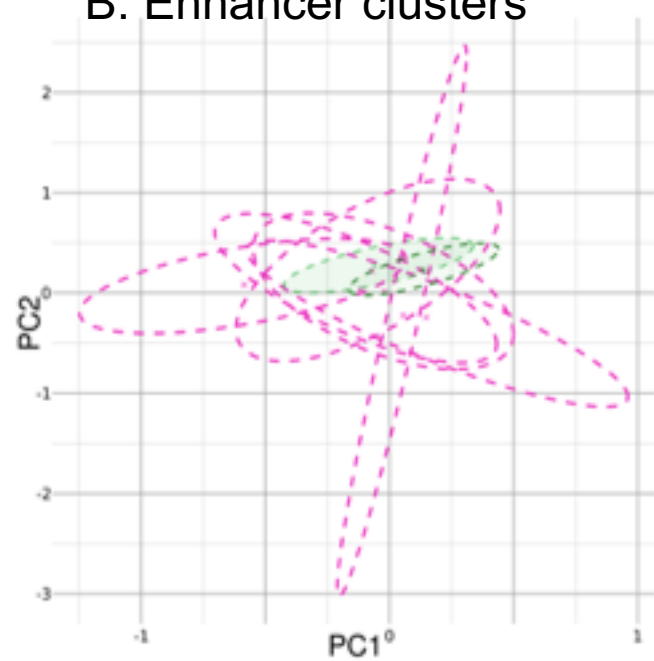

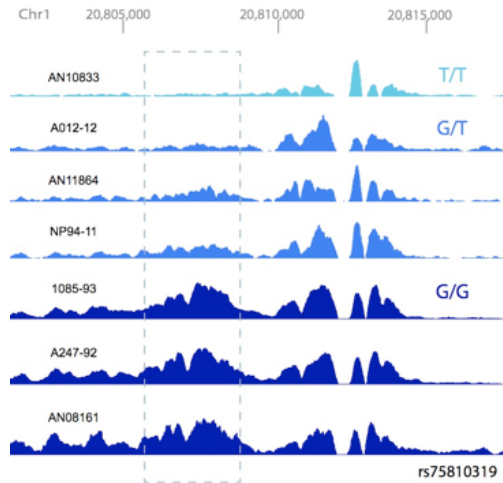

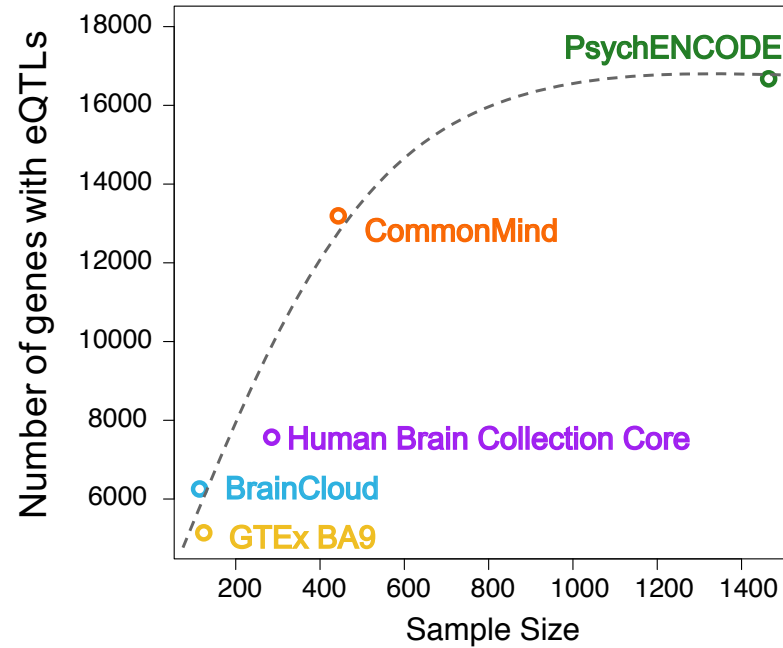

Figure 3. Comparative analysis

A. QTLs

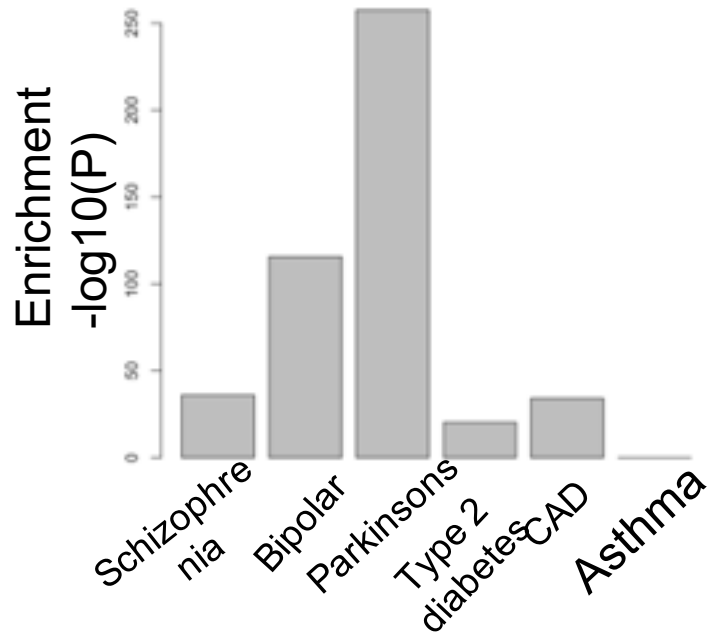

B. # of eGenes

C. Stats about QTLs

D. Comparison with GWAS

E. Annotations of eQTLs

Figure 4 QTL analysis

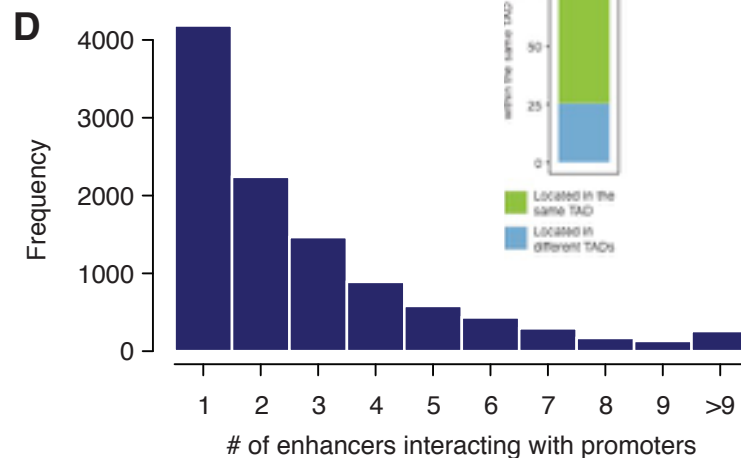

A. Hi-C

C. HiC vs. eQTL

B. enhancer-target linkage

D. TFs binding to enhancers

E. Gene regulatory network

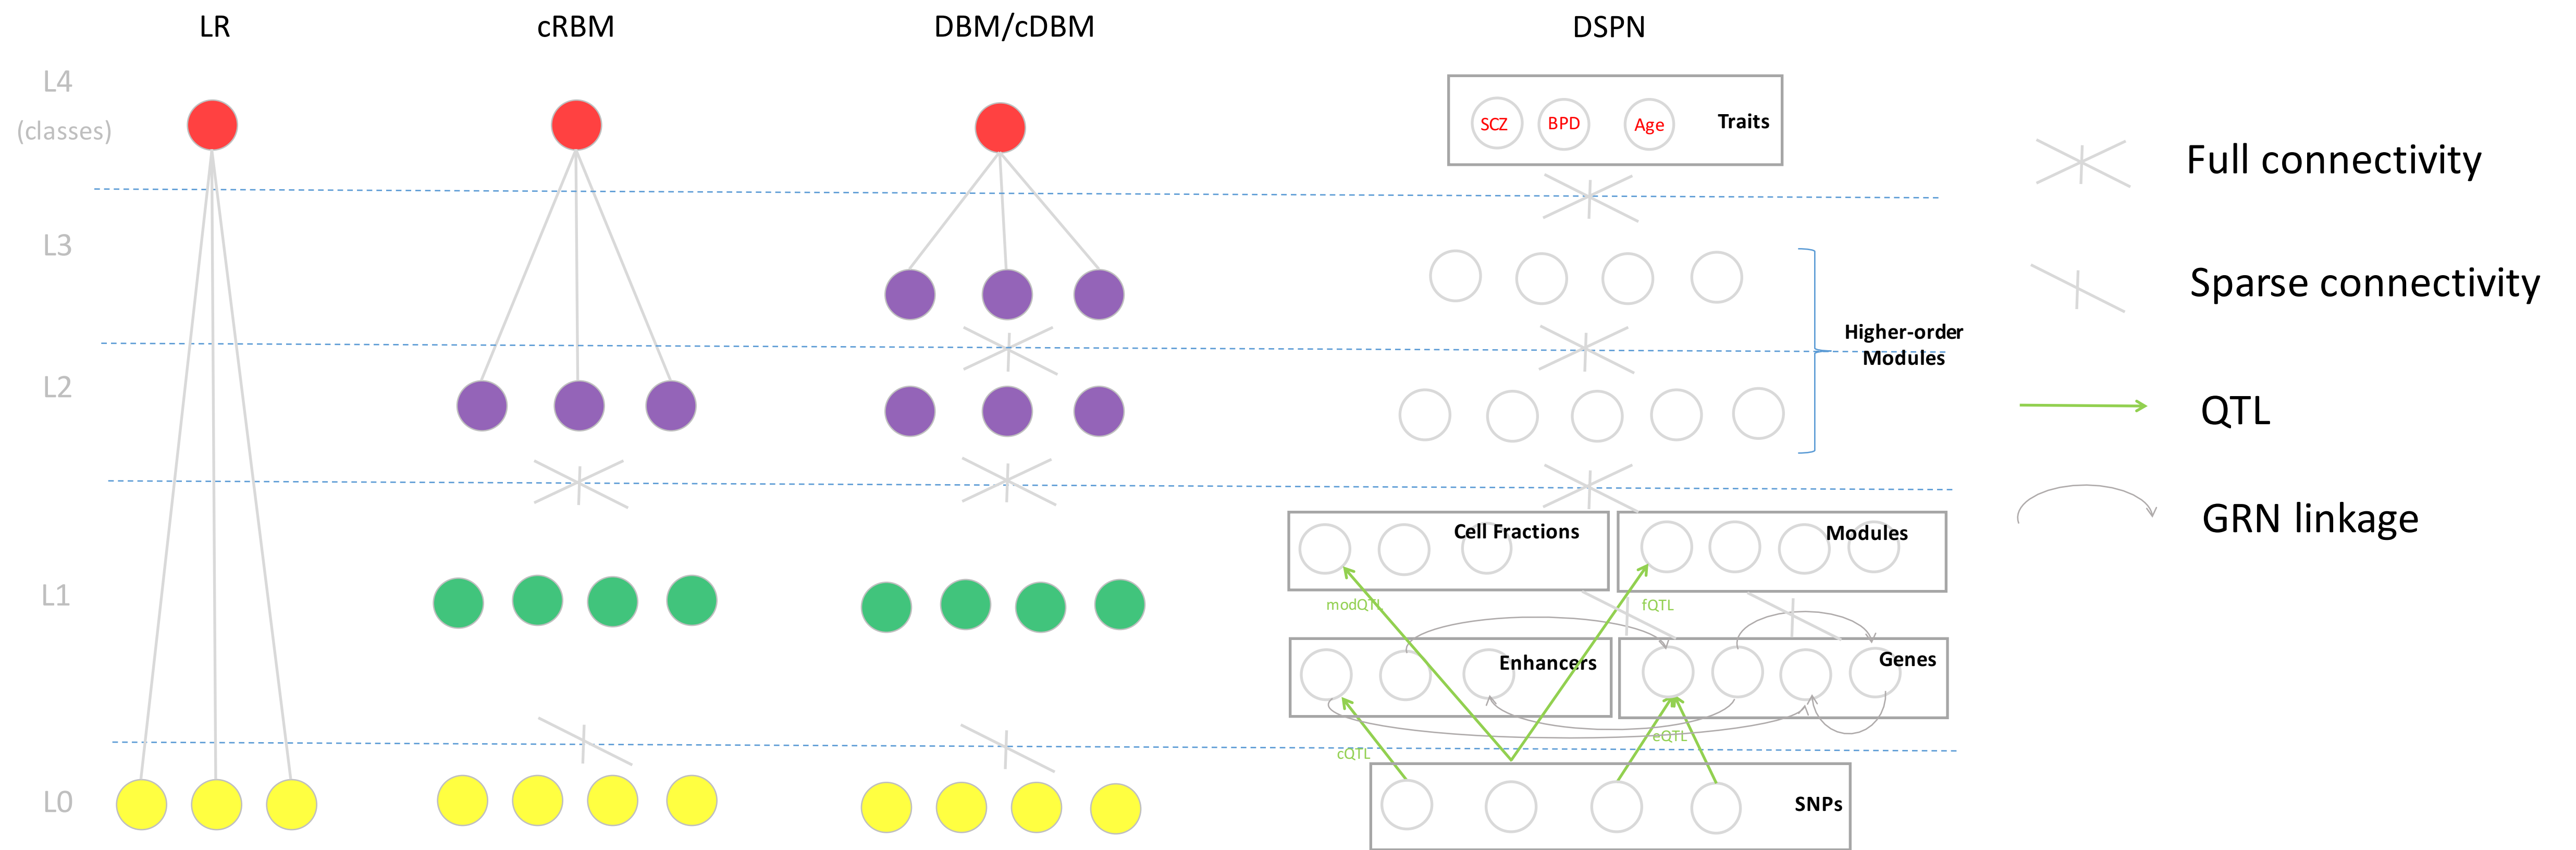

Figure 5 network

(a) schematic

(b) Full model performance: % accuracy on balanced sample

	SCZ	BIP	ASD	Gender	Ethnicity	Age (>51)
Gen (LR)	54.6%	56.7%	50%	50%	99.0%	61.9%
Tr (LR)	63.0%	63.3%	51.7%	69.7%	86.0%	81.2%
Tr (DSPN)	73.6%	76.7%	73.3%	72.1%	87.7%	86.2%

Gen = Genome-based; Tr = Transcriptome-based; LR = Logistic Regression; DSPN = Deep Structured Phenotype Network

(d) Imputation-based vs Full model: % variance explained on liability scale

	Gen (LR)	Imputed (eQTL only)	Imputed (fQTL only)	Imputed (cQTL only)	Imputed (all)	DSPN (full model)
SCZ	0.5%	1.3%	4.5%	-	4.5%	32.8%
BIP	3.4%	16.3%	8.7%	-	22.6%	53.8%
ASD	0%	0.4%	0%	7.4%	7.4%	21.4%

(c) Transcriptome and epigenome imputation; % accuracy (binarized)

Expression

# genes	All	1000	500	250	100	50	10
Test accuracy	52.7	55.0	56.9	59.2	63.1	66.3	72.9

Enhancers

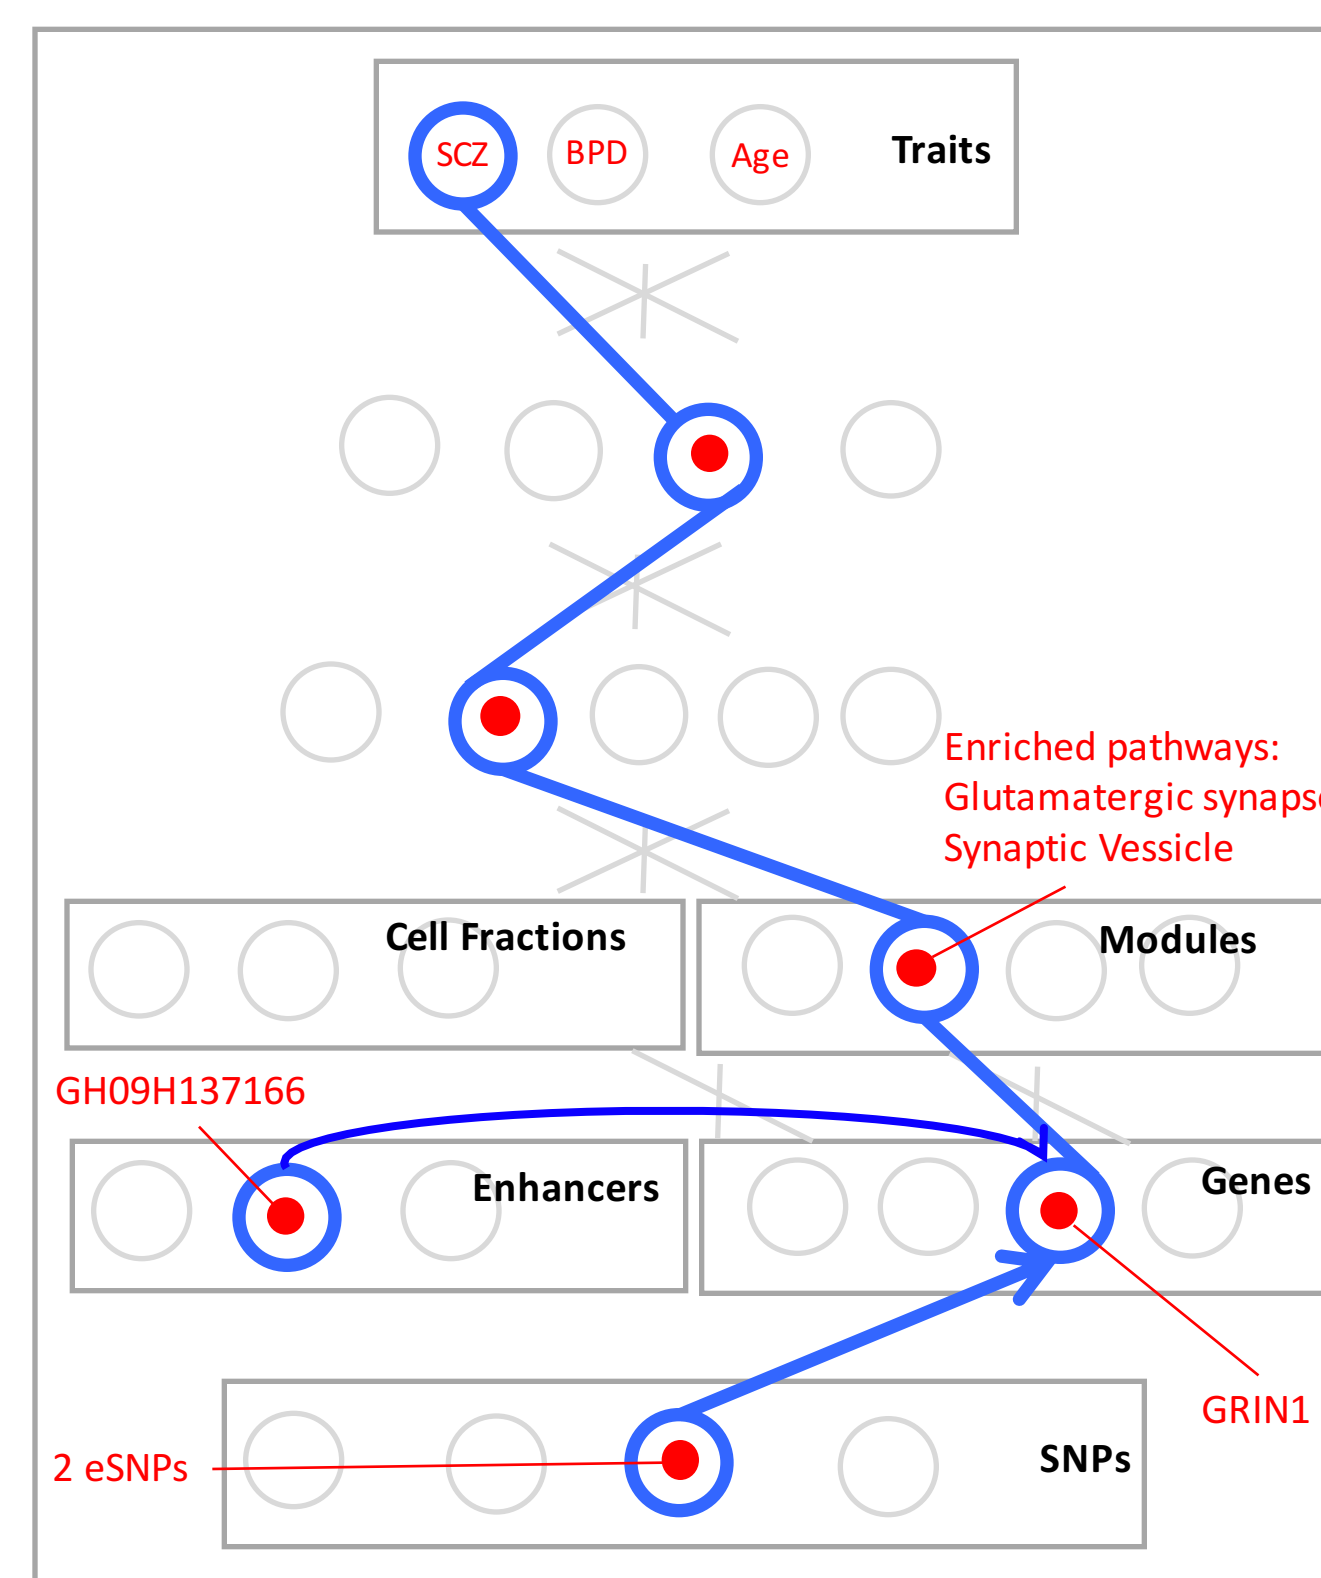

# genes	All	1000	500	250	100	50	10
Test accuracy							

Prediction with imputation

SCZ	BIP	ASD
57.9%	66.7%	65%
